

Unifying application security and vulnerability management with ArmorCode

Agile, DevOps, cloud deployment, microservices, and open source have all dramatically accelerated application delivery and complexity. Today's security teams depend on a collection of point security tools and siloed manual processes to keep pace with development teams and ensure software is released securely. This leaves them struggling to gain the visibility, insight, & scale they need to identify and protect the always changing and growing application risk surface.

ArmorCode AppSecOps – Supercharge your security team's impact

The ArmorCode AppSecOps platform provides security teams with the insight, agility, and cross-team collaboration needed to build, deliver, and scale an effective and efficient AppSec program across the entire organization and DevSecOps pipeline.

Get a complete picture of risk, prioritized

See and correlate your security issues across your tooling with business context in one unified platform, no matter your security tooling or infrastructure

Keep pace with software development

Eliminate manual, repetitive, and low value work across development, security, and operations teams through process and workflow automation

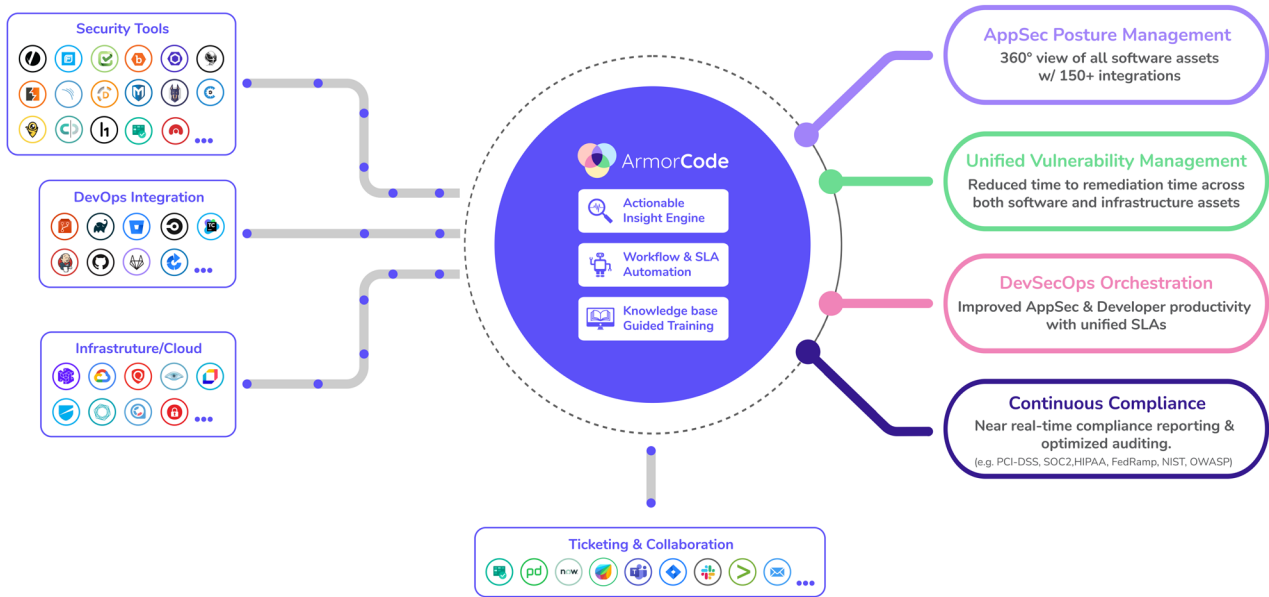

Collaborate with developers, at scale

Scale security success across the organization by creating shared SLAs and ensuring that the right teams get contextualized issues seamlessly within their existing workflows.

The ArmorCode AppSecOps Platform

Break down security silos with Intelligent Data Graph

With 150+ integrations, ArmorCode ingests findings from your security tooling and infrastructure, and normalizes and de-dupes them to deliver comprehensive view of your security posture and coverage

Prioritize your risks with Adaptive Risk Scoring

Group similar findings and correlate them with business context and threat intelligence to accurately prioritize risks across your application and infrastructure.

Move faster with No-Code DevSecOps Workflow & SLA Automation

Manage and track cross-team SLAs & automate DevSecOps workflows to effectively "shift left" and scale AppSec success

Improve remediation effectiveness with the Adaptive Knowledge Base

Elevate tribal knowledge within the development team to scale best practices to all developers and AppSec team members

“ ArmorCode's intelligent application security platform gives us unified visibility into AppSec postures and automates complex DevSecOps workflows. As a result, we are able to save significant time and effort.

-Aaron Peck, Chief Information Security Officer, Shutterfly
